F970

LP-E6

D28

Remark: Different specifications of the battery, capability is different. The working time for the monitor will be different. Higher capability (working time) will be longer.

2. Power input way

There are some ways to supply the power of the monitor.

1. The power supply by the adapter. 12V/1.0A is optional DC voltage changer, insert DC power input interface directly. It can be choosed qualified adapter which current with output voltage DC 6~15V, output capacity >10W by customers

Please note that the polarity of power input is inner POSITIVE, outer

NEGATIVE. Otherwise will damage the product. (see attached image)

Please use the adapter attached in the accessories. If necessary to use other specifications adapter, please note to provide the qualified adapter which power supply should be not less than 10W (DC6V-24V)

2. Another option of power source is using batteries. The product back case including battery slot is available for three types of batteries. Customers can choose different battery slots according to their needs.

Battery install way as below picture

Suggestion: Better remove the battery for long-term NO use this product.

Different specifications of the battery, capability is different. The working time for the monitor will be different. Higher capability (working time) will be longer.

Without design charging circuit for the monitor, please remove the battery to the battery charger for charge.

3. This product also can be by 4-Pin XLD interface to use the power supplied from camera.

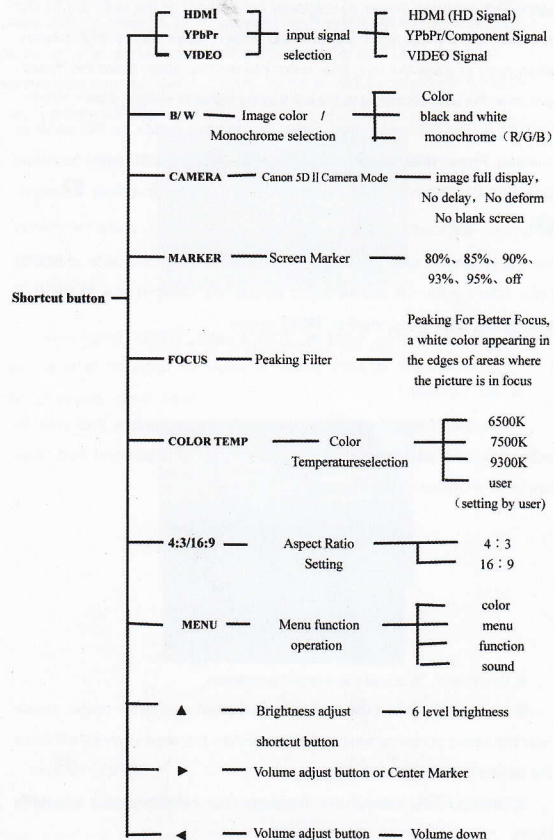

Pin Number	Signal
1	GND
2-3	NC
4	+12V

Operating instruction (When operating, the monitor should be power on in the working state)

3. Operating instructions
